### **DETAILED ACTION**

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1 –11, drawn to a continuous contacting apparatus for separating a liquid component from a liquid mixture, classified in class 202, subclass 182.
- II. Claims 12-20, drawn to a continuous contacting apparatus for exchanging heat released by a desiccant classified in class 34, subclass 523.

The inventions are distinct, each from the other because:

Inventions 1 and 11 are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different designs, modes of operation, and effects (MPEP § 802.01 and § 806.06). In the instant case, the different inventions have different modes of operation, and effects. The invention of group 1 is directed to separation of components of a mixture in the presence of a carrier gas, whereas the invention of group 11 is directed to a heat- exchanging design with a dessicant regenerator.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
